Environmental Data Program

Next-level transparency for better-informed product choices

The Environmental Data Program is a framework for how we measure, categorize, and compare the environmental attributes and footprint of our products.

Using a rigorous, fact-based methodology, the program provides environmental data from across the product lifecycle.

Five data categories across the product lifecycle

Use Better: How sustainable a product is, including environmental footprint, materials and substances, packaging, and energy efficiency.

Use Longer: How a product's life time can be effectively extended in terms of reparability and updatability.

Use Again: How a product can be reused, from dismantling and remanufacturing to recyclability and manufacturer take back.

With this transparent, verified data, customers and partners are empowered to make conscious environmental choices and accurately evaluate and report on sustainability performance.

All our hardware offers have an associated environmental data available on se.com product pages.

Learn more about the
Environmental Data Program

Developed with a strong safety focus, the Multi9 range aims to protect users and installations from major electrical risks such as short circuits, earth leakages, overloads and surge protections.

A comprehensive range for enhanced protection against electrical threats.

Multi9™ is a range of DIN rail modular devices, a solution offering high performance. Multi9 range is built to meet the major standards for industry applications. Designed to meet your needs for most types of machines, it offers a wide range of modular devices providing protection, signalling functions and accessories.

Renowned quality

World leader's proven technology and experience.

Available worldwide

Sold under the same commercial reference.

Optimized

Small footprint to reduce your panel size, cost effective, less commercial references.

Multi-standard

Multi9 covers main standards for industry application: UL/CSA for North America, IEC/EN, GB/T and others for the rest of the world. It allows a unique panel design.

Wide range of offers to cover main functions in a control panel

Wide range of solutions that are customized to fit your efficiency and sustainability needs.

Optimized references which is easy to select

- Time-saving
- Easy to procure and install
- Meaningful commercial references.

Multi-standard

Multi9 - range with advanced protection

Developed with a strong safety focus, the Multi9 range aims to protect users and installations from major electrical risks such as short circuits, earth leakages, overloads and surge protections.

Miniature Circuit Breakers

Protection against short circuits and overcurrent faults contributing to improved continuity of service.

- Designed to prevent accidental contact with live part
- Helps to avoid false insertion of cables and loose termination with Pull up terminals
- Total Flexibility : Line-Load reversibility
- Low cost with higher performance: Cascading. Cascading charts available From ACB-MCCB-MCB level.
- Reduce Downtime: selectivity. Selectivity charts available From ACB-MCCB-MCB level
- Increased service life: Fast Closing mechanism
- Recyclable & recoverable materials.

Residual Current Devices

Reliable protection against earth faults, fire risks and electrocution, helping enhance people's safety and supporting efficiency and service continuity.

- Easy monitoring: Earth fault indication on front face
- A-SI (Super Immunised) type RCDs offer enhanced immunity to electrical disturbances and polluted and corrosive environments
- Field fittable auxiliaries for advanced protection & monitoring.

Surge Protective Devices

Surge protection, harmonic filtering and voltage regulation for industrial environments.

- An affordable way to help reduce risks linked to electrical surges
- Surge Protective Devices help reduce the impact of electrical surges on your equipment and may contribute to extending their service life
- By limiting excessive voltage from surges, these devices help reduce stress on appliances, HVAC systems and other equipment, which may contribute to lowering maintenance needs.

Indication and Tripping Auxiliaries

OF, SD, OF/SD+OF for standard (from 100 mA to 6 A) and advanced (from 2 mA to 100 mA) applications.

- Compliant in harsh environments with low current auxiliaries
- Optimize your wiring (less wires and wiring time) inside a panel with the daisy chain architecture with low current auxiliaries
- Monitor up to 100 protective devices (permanently closed) under the daisy chain with low current auxiliaries
- Tripping auxiliaries: MN, MX
- Instantaneous or delayed option: independent of the supply voltage.

Wide range of offers to cover main functions in Control Panels

Compliant with main industry standards, Multi9 is ideally suited for multiple types of machine and equipment, providing you not only with protection but plenty of accessories as well as signaling functions.

Time saving

Easy to buy from same vendor and install

Easy coordination

Easy maintenance

PLC (Programmable Logic Controllers)

Control and monitor industrial operations in a sustainable, flexible and efficient way, with built-in features designed to support protection needs.

Push buttons

Provide robust, ergonomic and easy control of machines and manufacturing lines delivering efficiency and effectiveness.

HMI

Simple and effective means of connecting systems, collecting data and presenting information. Perform diagnostics, add control and adjust system settings on simple or compact applications from the smallest text display to the most sophisticated industrial PC.

Speed drives

Powerful and robust combination for your motor control solutions made to meet your needs in various applications, such as industrial processes, machines or buildings.

Multi9 MCB Range Highlights

Multi9 C60BP

Miniature circuit breaker for Branch Protection

- UL 489, CSA, IEC and CCC certified,
- UL 489 performances: up to 35 A in 480Y/277V and up to 63 A in 240 V,
- Optimized design and smaller footprint (103 mm / 4,05 in): each references up to 35 A, cover both 480Y/277V and 240 V power supplies,
- In addition to the accessories range, the UL cuttable combs are now available.

Multi9 C60BPR

Miniature circuit breaker for Branch Protection with Ring terminal

- UL 489, CSA, IEC and CCC certified,
- UL 489 performances: up to 35 A in 480Y/277V and up to 63 A in 240 V,
- Optimized design and smaller footprint: each references up to 35 A cover both 480Y/277V and 240 V power supplies,
- Ring tongue terminal ready to wire as delivered open.

Multi9 C60SP

Miniature Circuit Breaker for Supplementary Protection

- UL 1077, CSA, IEC and CCC certified
- UL 1077 performances: up to 63A in 480 Y/277 V
- B, C & D curves

Multi9 C60N/H/L

Miniature Circuit Breaker for IEC zone

- IEC/EN 60947-2 and CCC certified
- Up to 20 kA (440 V)
- B, C & D curves

Multi9 C60H-DC

Miniature circuit breaker, "H" breaking capacity for Direct Current applications

- UL1077, IEC, CCC certified,
- To protect your direct current applications up to 500 V DC
- B, C & K curves

Multi9 RCD Range Highlights

Multi9 Vigi C60

A flexible solution to associate with a C60 MCB to enhance the protection against the earth fault current

- IEC/EN 61009-1
- Type AC and A-SI
- Compatible with MCB up to 63 A
- Type A-SI with high performance with polluted and corrosive environments
- 2P 230 V - 240 V
- 3P/4P 400 V - 415 V
- 50 Hz

Multi9 Vigi N40

A flexible solution to associate with a 3P N40 MCB to enhance the protection against the earth fault current

- IEC/EN 61009-1
- Type AC and A-SI
- Compatible with MCB up to 40 A
- Type A-SI with high performance with polluted and corrosive environments
- 3P+N 400 V - 415 V
- 50 Hz

Multi9 N40 RCBO

A single product protects the installation from overcurrent and earth fault current

- IEC/EN 60947-2
- Type AC
- C curve
- Different ratings available: 6 A, 10 A and 16 A
- 1P+N 240 V AC
- 50 Hz

Multi9 RCD Range Highlights

Multi9 GFP

Double standard residual current circuit breakers (RCCB)

- UL 1053 and IEC/EN 61008-1
- Type A-SI with high performance with polluted and corrosive environments
- Up to 100 A rating
- 2P 230 V - 240 V
- 4P 400 V - 415 V
- 50 / 60 Hz

Acti9 iID B-SI

Type B RCCB with Super Immunity performance

- IEC/EN 61008-2-1, IEC/EN 62423, IEC 61543
- Up to 80 A rating
- Type B-SI with high performance with polluted and corrosive environments
- Applications using 3-poles drives
- Protection in the event of a continuous earth fault current on networks
- Protection against earth fault currents of different types: AC, A and F

Acti9 RCCB-ID 125 A

A 125 A RCCB providing different RCD protection classes

- IEC/EN 61008-1, IEC/EN 61008-2-1, IEC/EN 62423
- Type AC, A, A-SI and B
- Provides total discrimination with a non-selective RCD placed downstream
- 2P 230 V
- 4P 400 V
- 50 Hz

Multi9 RCCB-ID

RCCB offer for 2P and 4P applications

- IEC/EN 61008-1
- Type AC and A-SI
- Up to 63 A
- 2P 230 V
- 4P 400 V
- 50 Hz

Multi9 Range Highlights

Multi9 Surge Protective Devices

Surge protection, harmonic filtering and voltage regulation for industrial environments.

- UL 1449 4th Edition Recognized, CSA C22.2 No. 269.4-17, 1st Edition

PowerLogic™ PowerTag Energy

PowerTag Energy is a wireless-communication energy sensor.

PowerTag Energy is designed specifically for Energy Management, Load Monitoring and Power Availability applications.

Associated to a concentrator or a gateway, PowerTag provides a wireless Active Energy Class 1 solution as per IEC 61557-12 to monitor energy at any level of a distribution panel.

Suitable for industrial and machine applications, PowerTag Energy sensor incorporates the features needed to perform accurate real-time measurements (U, V, I, P, PF) and energy values up to 160 A.

- IEC 61557-12, IEC 61010-1, IEC61010-2-30, ETSI EN 301 489-17
- Some references are compliant UL Listed (see page 55)

Multi9 C60BP - Z, C, D curves – Tunnel terminals

UL 489, CSA C22.2 No 5, IEC/EN 60947-2, GB/T 14048.2

As per the above standards:

C60BP are multi-standard miniature circuit breakers and branch circuit protection as defined by UL 489. It combines following functions:

- circuit protection against short-circuit currents
- circuit protection against overload currents
- tripping and electrical fault indication by the addition of auxiliaries.

■ Compatible with PowerTag Energy

⚠ WARNING

FIRE HAZARD

- The connection polarity must be observed (marked on the front panel).
 - Use only with direct current.
 - If two poles are used in series for the American network, use at least a 12 inch / 30 cm cable.
- Failure to follow these instructions can result in death, serious injury, or equipment damage.**

Miniature Circuit Breakers

Multi9 C60N - B, C, D curves

C60N 1P

C60N 3P

C60N 2P

C60N 4P

IEC/EN 60947-2, GB/T 14048.2

As per the above standards:

- C60N circuit breakers are circuit breakers which combine the following functions:
 - circuit protection against short-circuit currents,
 - circuit protection against overload currents,
 - breaking and industrial disconnection as per standards IEC/EN 60947-2.
- A green strip on the toggle indicates full opening of all the poles allowing downstream maintenance operation in better safety conditions.

- Increased product service life thanks to:
 - overvoltage resistance,
 - high performance limitation,
 - fast closing independent of the speed of actuation of the toggle.
- Upstream or downstream connection.

- Compatible with PowerTag Energy (for 2P, only 200... 240 V AC)

Positive contact indication

- Suitability for isolation in accordance with the IEC/EN 60947-2 standard.

Alternating current (AC) 50/60 Hz

IEC/EN 60947-2, GB/T 14048.2

As per the above standards:

- C60H circuit breakers are circuit breakers which combine the following functions:
 - circuit protection against short-circuit currents,
 - circuit protection against overload currents,
 - breaking and industrial disconnection as per standards IEC/EN 60947-2.
- A green strip on the toggle indicates full opening of all the poles allowing downstream maintenance operation in better safety conditions.

■ Increased product service life thanks to:

- overvoltage resistance,
- high performance limitation,
- fast closing independent of the speed of actuation of the toggle.
- Upstream or downstream connection.

■ Compatible with PowerTag Energy

Positive contact indication

- Suitability for isolation in accordance with the IEC/EN 60947-2 standard.

IEC/EN 60947-2

As per the above standards:

C60CTRL circuit breakers protect and isolate:

- control circuits for industrial equipment with contactor coils, transformers, small motors, etc.
- programmable controllers (PLCs), voltage presence indicators, measuring and monitoring instruments, etc.
- single-phase auxiliary circuits such as solenoid valves, battery chargers, etc.

■ C60CTRL circuit breakers combine the following features:

- protection of circuits against short-circuit and overload currents,
- breaking and isolation capability in the industrial sector to IEC/EN 60947-2.

■ A green strip on the toggle indicates full opening of all the poles allowing downstream maintenance operation in better safety conditions.

■ The service life of the products is improved by:

- good overvoltage withstand capacity,
- fast closure, independent of handle operating speed.

■ They can be connected upstream and downstream.

Multi9 GFP - Ground Fault Protector

UL 1053 IEC/EN 61008-1

As per the above standards:

UL 1053 residual current circuit breakers already protected upstream by a circuit breaker device are used for:

- control and disconnection of electric circuits
- protection of people against electric shock by direct and indirect contacts
- protection of installations against insulation faults
- enhanced continuity of supply, during a series of close lightning strokes, IT earthing system, equipment including interference suppression filters, variable speed controllers, frequency converters, electronic ballasts for lighting
- enhanced earth leakage protection: in presence of harmonics or high frequency rejections.

They comply with RCD standards UL 1053 and IEC/EN 61008.

A-SI type GFPs are ideal for operation in environments with a humid atmosphere and/or polluted by aggressive agents: swimming pools, marinas, agri-food industries, water treatment stations, industrial sites, etc.

Technical data

GFP UL 1053 A-SI type

Technical data

Insulation voltage (Ui)	440 V
Pollution degree	3
Making and breaking capacity: rated residual current (I Δ m)	1 500 A
Rated impulse withstand voltage (Uimp)	6 kV
Utilisation category	AC 23A
Level of immunity	In current wave 8/20 μ s: 3 kA In damped recurrent current wave 0.5 μ s/100 kHz: 200 A
Short-circuit current withstand (I Δ c = Inc)	10 kA with 100 A gG upstream fuse
Phase-to-phase test circuit	To avoid external bridging on use on three-phase network without neutral
Locking possible in "tripped" position	By padlocking facility (not supplied)
Release with fixed sensitivity for all ratings	Instantaneous release: UL 1053 : $\pm$ 15 % IEC/EN 61008 : +0 %, -50 %
Behaviour in case of voltage drop	 Residual current protection down to 0 V according to IEC/EN 61008-1 § 3.3.4
Earth fault indication	On front face by red mechanical indicator
Number of cycles (O-C)	20,000 cycles
Degree of protection (IEC 60529)	Device only IP20 Device in modular enclosure IP40 Insulation class II
Operating temperature	 -25°C to +60°C / -13°F to 140°F
Storage temperature	-40°C to +70°C / -40°F to 158°F
Tropicalization (IEC 60068-1)	Treatment 2 (relative humidity 95 % at 55°C / 131°F)
Dissipated power	See page 108

Residual current devices

Acti9 iID B-SI type Residual Current Circuit Breakers (RCCB)

IEC/EN 61008-2-1, IEC/EN 62423
IEC 61543, GB/T 16916.21

As per the above standards:

- The Acti9 iID B-SI type residual current circuit breakers provide:
 - protection of persons against electric shock by direct contact (30 mA),
 - protection of persons against electric shock by indirect contact (≥ 300 mA),
 - protection of installations against the risk of fire (300 mA or 500 mA).

B-SI type

The Acti9 iID B-SI type residual current circuit breakers provide:

- protection in the event of a continuous earth fault current on networks generated by:
 - controllers and variable speed drives,
 - battery chargers and inverters, such as used in photovoltaic application,
 - backed-up power supplies.

- They include protection against earth fault currents:

- sinusoidal AC residual currents (AC type),
- pulsed DC residual currents (A type),
- multi frequency residual current (F type).

- The use of Acti9 iID B-SI type residual current circuit breaker can be made mandatory, according to standards applicable in country.

- For applications using 3-poles drives, such as:

- crane,
- lift,
- HVAC,
- pumping system.

B type is needed.

For more information, see Earth Fault Protection guide (CA908066E).

- The Acti9 iID B-SI type works optimally with the variable speed drives manufactured by Schneider Electric, even with a long cable length between motor and variable speed drive (up to 50 m).

- SI technology is embedded in Acti9 iID B-SI type residual current circuit breaker, providing increased immunity from electrical interference and polluted environments.

- The Acti9 iID B-SI type is compatible with Schneider Electric AC and A types wired in parallel or in series in the installation, following coordination tables (refer to Earth Fault Protection guide CA908066E).

- Compatible with PowerTag Energy

4P

A9N16940

27145

16938

16939

IEC/EN 61008-1 IEC/EN 61008-2-1

As per the above standards:

- The Acti9 RCCB-ID 125 A Residual Current Circuit Breakers provide:
 - protection of persons against electric shock by direct contact (30 mA),
 - protection of persons against electric shock by indirect contact (≥ 100 mA),
 - protection of installations against the risk of fire (300 mA or 500 mA).

A-SI type

It provides increased immunity from electrical interference and polluted or corrosive environments.

B type

- B type RCCBs provide protection against earth fault currents:

- sinusoidal AC residual currents (AC type),
- pulsed DC residual currents (A type),
- multi frequency residual current (F type).

In addition they protect against smooth direct currents and high frequency alternating currents.

- These earth fault currents can be generated by:

- controllers and variable speed drives,
- battery chargers and inverters,
- backed-up power supplies.

Typical applications include cranes, lifts, HVAC, pumping system, EV or PV.

- It is compliant with IEC/EN 62423.

Instantaneous

It allows instantaneous tripping (without time delay).

Selective

It provides total selectivity when installed upstream of a non-selective RCD.

- Compatible with PowerTag Energy (4P only)

Residual Current Devices

Multi9 Vigì N40 – Residual Current Devices – Add-on for N40

IEC

Earth leakage protection devices offer the following functions:

- protection of electrical installations against insulation faults
- protection for people against direct and indirect contact
- protection of the installations against fire risks.

IEC/EN 61009-1

As per the above standard:

The Vigì N40N modules, to be combined with a circuit breaker, incorporate in a single enclosure the residual current relay and the toroid.

- The residual current tripping device is electromechanical and operates without an auxiliary source.
- A homogeneous unit in compliance with the EN 61009-1 and EN 61009-2-1 standards, a residual current device retains all the characteristics of the circuit breaker alone; in particular, the thermal tripping threshold of the circuit breaker is retained in the presence of the earth leakage module.

Operation

- When an earth fault occurs, the Vigì module causes automatic opening of the circuit breaker with which it is combined. Fault indication is performed by a red strip on the operating handle for Vigì module resetting.
- Resetting of the earth leakage module is performed, at the user's choice:
 - either by the reset handle of the circuit breaker (in one operation),
 - or independently of the circuit breaker (in 2 operations).

A-SI type

The A-SI type provides increased immunity from electrical interference and polluted or corrosive environments.

Technical data

Main characteristics

Insulation voltage (Ui)	400 V AC
Pollution degree	3
Rated impulse withstand voltage (Uimp)	4 kV
Setting temperature for ratings	50°C / 122°F
Earth leakage protection with instantaneous tripping	30, 300 mA
Magnetic tripping C curve	8.5 In (± 20 %)
8/20 µs impulse withstand current	250 A

According to IEC/EN 60947-2

Breaking capacity (Icu)	6 kA
Service breaking capacity (Ics)	75 % Icu
Behaviour in case of voltage drop	Residual current protection down to 0V according to IEC/EN 60947-2 § B.3.1.1

Additional characteristics

Degree of protection (IEC 60529)	Device only		IP20
	Device in modular enclosure		IP40 Insulation class II
Endurance (O-C)	Electrical	N40 Vigi ≤ 20A	20,000 cycles
		N40 Vigi ≥ 25A	10,000 cycles
	Mechanical		20,000 cycles
Overvoltage category (IEC 60364)	IV		
Operating temperature	-5°C to +60°C / 23°F to 140°F		
Storage temperature	-30°C to +70°C / -22°F to 158°F		
Tropicalization (IEC 60068-1)	Treatment 2 (relative humidity 95 % at 55°C / 131°F)		
Dissipated power	See page 108		

Railways

Type	1P+N
Mass of combustible material	45.8 g / 1.59 oz
Type of combustible material	PA6 MD25 FR & PA6 GF20 FR
Fire and smoke requirements (EN 45545-2)	HL2 R22 / HL2 R23
Resistance to shocks and vibrations (IEC 61373)	■ Category 1 ■ Class B

Weight (g / oz)

Residual current device	
Type	N40 Vigī
1P+N	125 g / 4.41 oz

Dimensions (mm / inches)

Load protection

Multi9 PRD1 75r

Type 1 Surge Protective Devices

The Type 1 range of Surge Protective Device meets the normative withstand capability of current wave type 8/20 μ s.

PRD1 75r Surge Protective Devices are fitted with dry contacts to send "end-of-life indication" information.

PRD1 75r Surge Protective Devices are fitted with easy-to-replace withdrawable cartridges.

UL 1449 4th Edition Recognized, CSA C22.2 No. 269.4-17, 1st Ed

As per the above standard:

The PRD1 75r Surge Protective Device (SPD) is rated UL and CSA Type 1, and is well suited for use installed within electrical equipment. Rated at 200kA SCCR, without additional upstream protection, it can be installed in a variety of installations including service entrance, branch panels and control panel environments.

For serviceability considerations, connecting through a disconnecter is recommended.

Replaceable devices are available, should the device reach end of life due to a surge event or sustained over-voltage.

PowerLogic™

PowerTag Energy

PowerTag Energy, used together with a concentrator or a gateway to collect and process the data, provides circuit monitoring and diagnosis down to load level.

- Wireless-communication technology simplifies switchboard wiring and commissioning operations: no wiring is required for the PowerTag Energy to communicate with the concentrator or the gateway.
- With its compact design and innovative concept, PowerTag Energy fits directly on the protective device and as a result has no impact on DIN rail occupancy and switchboard size.
- System scalability: PowerTag Energy can be quickly and easily installed in new or existing panels at any time.

PowerTag Energy sensor is acting as an autonomous meter. Energy counters are stored inside PowerTag Energy sensor.

Advantages:

- Wireless-communication
- Voltage loss alarming
- Energy Class 1 accuracy as per IEC 61557-12
- Compact design
- Easy installation and commissioning
- Scalable solution
- Well suited for retrofit or new panels.

Note:

In association with a contactor, a Variable Speed Drive or a motor starter: PowerTag Energy can ONLY be installed UPSTREAM these devices.

Multi9 Electrical auxiliaries for MCB and RCD, except Acti9 iID RCCB

Compliance with electrical auxiliaries standards

- UL 489 Branch circuit protection.
- C22.2 No. 5 Branch circuit protection.
- UL 1077 Supplementary Protection.
- C22.2 No. 235 Supplementary Protection.
- IEC/EN 60947-2 and IEC/EN 60947-5-1.
- GB/T 14048.2, GB/T 14048.5.

- The electrical auxiliaries provide the remote tripping or position (opened/closed/tripped) indication functions of these devices in the event of a fault.
- They clip on (no tool required) to the left-hand side of the associated device.
- The SD+OF auxiliary is a 2-in-1 product: a mechanical selector switch is used to select one of two contacts: SD or OF.
- The low current auxiliaries OF, SD (2 to 100 mA) are especially dedicated to low current application to report status information to a Programmable Logic Controller (Industry).

Combination table

Indication auxiliaries	Tripping auxiliaries	Devices
 3 OF + SD/OF maxi	 2 OF + SD/OF maxi	 1 maxi
 1 OF maxi	 1 (OF + SD/OF or SD or OF) maxi	 2 maxi
 None	 1 (OF + SD/OF or OF) maxi	 2 maxi
 1 OF maxi	 1 OF maxi	 OF.S (26923) + RCCB-ID, GFP

Note: iOF and iSD in combination table can be (2 to 100 mA) or (100 mA to 6A) products.

- Note** Tripping devices must be installed first.
 If two tripping devices are used: the MN undervoltage release must be installed first.
 Indication auxiliaries: install the SD auxiliary first

Railways

Type	MN, MNs, MNx, MX, MX+OF	OF, SD, SD+OF
Mass of combustible material	25.5 g / 0.88 oz	17.6 g / 0.6 oz
Type of combustible material	PA6 GF20 FR	
Fire and smoke requirements (EN 45545-2)	HL2 R22 / HL2 R23	
Resistance to shocks and vibrations (IEC 61373)	■ Category 1 ■ Class B	

Multi9 Electrical auxiliaries for MCB and RCD, except Acti9 iLD RCCB (cont.)

Tripping							
Auxiliaries	MN	MN					
Type	Undervoltage release						
	Instantaneous					Delayed	
							
Function		■ Trips the device with which it is combined when its input voltage decreases (between 70 % and 35 % Un). ■ Prevents device closing again until its input voltage is restored					
						■ No tripping in the event of transient voltage dips (up to 0.2 s)	
Wiring diagrams							
Utilization		■ Emergency stoppage by normally closed push button ■ Improve the safety of power supply circuits for several machines by preventing "uncontrolled" restarting

Multi9 Electrical auxiliaries for MCB and RCD, except Acti9 iLD RCCB (cont.)

How to generate summary data using OF or SD contacts of low current electrical auxiliaries

- Electrical summary of the OF signals or electrical summary of the SD signals can be generated with low current indication auxiliaries (2 mA to 100 mA) wired as a daisy chain
- The OF connections and the SD connections must not be connected on the same daisy chain: 2 separate daisy chains are required to report OF information on the one hand and SD information on the other
- A daisy chain is made of up to 100 OF contacts or 100 SD contacts
- A daisy chain is connected locally to the PLC or the Controller (inside the same switchboard).

OF contacts within a daisy chain

- OF contacts are Normally Open (NO)
- The electrical summary of the OF signals can be done by cabling in series all OF signals
- Any open position opens the daisy chain and can be detected.

SD contacts within a daisy chain

- SD contacts are Normally Closed (NC)
- The electrical summary of the SD signals can be done by cabling in series all SD signals
- Any SD signal opens the daisy chain and can be detected.

Electrical auxiliaries for Acti9 iLD RCCB up to 80 A

■ The electrical auxiliaries are combined with iLD residual current circuit breakers; they enable tripping or remote indication of their position (opened/closed/tripped) upon an electrical fault.

■ The iOF/SD+OF auxiliary is a 2-in-1 product: via a mechanical selector switch, it provides two contacts, OF+SD or OF+OF.

■ The low current auxiliaries iOF, iSD, iSD+OF (2 to 100 mA) are especially dedicated to low current application to report status information to a Programmable Logic Controller (Industry) or a Controller (Building/BMS).

■ The iOF+SD24 auxiliary can report opened/closed (OF) status information and intentional or fault tripping of the associated device (SD) to the Acti9 Smartlink, a Programmable Logic Controller (Industry) or a Controller (Building/BMS), via the Ti24 interface (24 V DC).

Tripping auxiliaries:

IEC/EN 60947-2

- iMN: undervoltage release
- iMNs: delayed undervoltage release
- iMNx: undervoltage release, independant from supply voltage
- iMX: shunt release
- iMX+OF: shunt release with open/closed contact.

EN 50550

- iMSU: overvoltage release.

Indication auxiliaries:

IEC/EN 60947-5-1

- iOF: open/closed contact
- iSD: fault indicating contact
- iOF/SD+OF: open/closed contact and switchable OF or SD function

IEC/EN 60947-5-4

- Auxiliaries dedicated to low current applications (PLC...)
- iOF Low Current: open/closed contact
- iSD Low Current: fault indicating contact
- iSD+OF Low Current: open/closed contact and fault indicating SD contact
- iOF+SD24: open/closed contact OF and fault indicating contact SD with Ti24 interface.

Electrical auxiliaries for Acti9 iID RCCB up to 80 A (cont.)

Tripping							
Auxiliaries	iMN				iMNs		iMNx
Type	Undervoltage release						
	Instantaneous				Delayed		Independent of the supply voltage
							
Function	- Trips the device with which it is combined when its input voltage decreases (between 70 % and 35 % U_n). - Prevents device closing again until its input voltage is restored				Not tripping on transient voltage dip (up to 0.2 s)		- Tripping of the associated device by opening of the control circuit (e.g. push-button, dry contact) - A drop in the supply voltage does not trip the associated device - A locking push-button control allows the circuit protected (e.g. machine control) to be placed in safety configuration
Wiring diagrams							
Use	- Emergency stoppage by normally closed push button - Improve the safety of power supply circuits for several machines by preventing "uncontrolled" restarting				- Emergency stoppage with fail-safe principle - Insensitive to control circuit voltage variation to increase service continuity Important: Before any servicing operation switch off the mains power supply (voltage presence at terminals E1/E2)

*(U_a)

Voltages measured between the phase and the neutral conductor, at which the iMSU device must control the associated protective device.

Electrical auxiliaries for Acti9 iID RCCB up to 80 A (cont.)

iMSU						iMX		iMX+OF		
Overvoltage release						Shunt release		With open/closed auxiliary contact		
										
Switches off the power supply by opening the breaker with which it is combined, in the event that the phase/neutral voltage is exceeded (loss of neutral). For a four-phase network, use three iMSU tripping auxiliaries.						Trips the associated device when it is powered on		Includes an open/closed contact (OF) to indicate the "opened" or "closed" position of the device		
										
- Protection of equipment against overvoltages on the electrical network (neutral conductor break) - Voltage monitoring between phase and neutral conductors						Emergency stoppage by normally open push button		- Emergency stoppage by normally open push button - Remote indication of the position of the associated device

Comb busbars for C60BP

www.se.com

IEC

UL489, UL508, CSA C22.2 n°5, CSA C22.2 N°14-13,
IEC/EN 61439-1

These comb busbars are aimed to be used only with C60BP circuit breakers.
They perform distribution and subdistribution of the electric power supply
and allow rapid assembly and disassembly of equipment.

⚠️ DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH

- Use only cuttable comb busbars when recutting.
- After cutting, install end pieces and tooth covers to maintain insulation and IP20 finger safe protection.
- Never connect a comb busbar to products with a non-matching pole configuration. Risk of multi-phase bolted short-circuit.
- Always check that the head of group circuit breaker is in good working condition before connecting a comb busbar..

Failure to follow these instructions will result in death or serious injury.

⚠️ WARNING

EQUIPMENT OPERATION HAZARD

- Apply the specified tightening torque to avoid overheating or poor electrical contact.
 - Use only with the compatible device families listed on the page.
- Failure to follow these instructions can result in death or serious injury.**

Linergy DS screw distribution blocks

IEC/EN 60947-7-1, IEC/EN 61439-1 & 2

As per the above standards:

Description

- Single-pole or four-pole distribution block that can be installed on a standard DIN rail or on a mounting plate.
- Compatible with Prisma G and P, Pragma, Mini Pragma and Resbo series switchboards.
- Incomers and feeders are connected to screw terminals that accept rigid or flexible cables with ferrule.
- Optional: additional neutral terminal strip for four-pole distribution block.

Advantages

- Simplified power supply for main incomers.
- Easy phase balancing.
- Facilitates cabling through improved accessibility.
- Visible cabling.
- Insulation between phases.
- The single-pole distribution blocks are adjacent and bridgeable via the second incoming hole for parallel connection.

Dimensions (mm / inches)

The setup of circuit protective devices depends on the electrical installation standard. Multi9 devices (designed for machinery and equipment manufacturers, integrators, panelbuilders, etc.) are tested in accordance with the UL (Underwriter Laboratories) product standard in order to meet the requirements of the NEC (National Electric Code) installation standard, in force in the United States.

The CE Marking is an administrative formality for free circulation and sale on the territory of the European Union.

Made compulsory by a European directive, the CE Marking of products complies with the administrative and legal requirements. Designed for the European supervisory authorities (customs authorities), the "CE Marking" declarations and dossiers are produced under the sole responsibility of the manufacturer and undergo no conformity check by a third-party organization. Only quality marks issued and monitored by independent third-party organizations indicate conformity in terms of operation, compatibility, and safety with national and international standards.

UL 489

Branch circuit protection

The UL 489 standard applies primarily to the protection of circuits installed, in accordance with the NEC (National Electric Code):

- upstream of a device or a machine (branch circuit protection)
- inside the device or a machine, for certain loads (ventilation, air conditioning, heating, etc.)
- to power loads external to the device (motors, power sockets, etc.).

UL 1077

Supplementary protection - Internal protection of electrical equipment

The UL 1077 standard applies to circuit breakers for electrical equipment, in accordance with the NEC. These circuit breakers are considered as components forming part of the equipment but can in no case replace a UL 489 protective device. Their use is limited to the protection of specific loads exclusively inside the machine or equipment. Where the machine or equipment is powered upstream by a control panel, the UL 1077 protection must be combined with a UL 489 protective device in that panel.

CSA C22.2 No. 5-02

Branch circuit protection

The requirements of this standard cover circuit breakers that are specifically intended to provide service entrance, feeder and branch circuit protection in accordance with the National Installation Codes.

This standard is close to UL489.

CSA C22.2 No. 235-04

Supplementary protection - Internal protection of electrical equipment

This Standard applies to supplementary protectors that are intended for use as components within appliances or other electrical equipment where branch-circuit protection is already provided (or is not required), in accordance with the Rules of the Canadian Electrical Code.

This standard is close to UL1077.

IEC 60947-2

The IEC 60947-2 standard is an international product standard concerning circuit breakers; it is used for industrial circuit protection applications. It meets the requirements of the IEC 60364 installation standard.

EN 60947-2

The IEC 60947-2 standard is an European product standard concerning circuit breakers; it is used for industrial circuit protection applications. It meets the requirements of the IEC 60364 installation standard.

GB/T 14048.2

The GB/T 14048.2 standard is close to the IEC 60947-2 standard for installations on Chinese territory.

Residual Current Device standards

The setup of circuit protective devices including the RCD depends on the electrical installation standard. Multi9 GFP (designed for machinery and equipment manufacturers, integrators, panelbuilders, etc.) are tested in accordance with the UL (Underwriter Laboratories) product standard in order to meet the requirements of the NEC (National Electric Code) installation standard, in force in the United States.

The CE Marking is an administrative formality for free circulation and sale on the territory of the European Union.

Made compulsory by a European directive, the CE Marking of products complies with the administrative and legal requirements. Designed for the European supervisory authorities (customs authorities), the "CE Marking" declarations and folders are produced under the sole responsibility of the manufacturer and undergo no conformity check by a third-party organization. Only quality marks issued and monitored by independent third-party organizations indicate conformity in terms of operation, compatibility, and safety with national and international standards.

Multi9 RCDs compliant to IEC are also compliant to the European EN standards for use in European Countries.

UL 1053

Ground Fault Protector

The UL 1053 standard applies to the ground fault protection devices for circuits installed in accordance with the NEC (National Electric Code):

- protection against fire risks on the supply end devices
- protection of people against electric shock by direct and indirect contacts (failure of basic protection, involuntary contact with live parts, machines, or equipment with internal insulation faults for which the conductive parts become live)
- protection of installations against insulation faults (ground faults).

IEC 61008-1

Residual Current Circuit Breaker without overcurrent protection

The IEC 61008-1 standard is an international product standard of general rules for residual current circuit breakers with no overcurrent protection (RCCB); it is used for protection against electric shock and circuit protection applications. It meets the requirements of the IEC 60364 low voltage electrical installation standard.

EN 61008-1

Residual Current Circuit Breaker without overcurrent protection

The EN 61008-1 standard is a European product standard of general rules for residual current circuit breakers with no overcurrent protection (RCCB); it is used for protection against electric shock and circuit protection applications. It meets the requirements of the European application of IEC 60364 low voltage electrical installation standard.

IEC 61008-2-1

Residual Current Circuit Breaker without overcurrent protection, Voltage Independent (VI)

The IEC 61008-2-1 standard is an international product standard for residual current circuit breakers with no overcurrent protection (RCCB) functionally independent of the line voltage; it is used for protection against electric shock and circuit protection applications. It meets the requirements of the IEC 60364 low voltage electrical installation standard.

EN 61008-2-1

Residual Current Circuit Breaker without overcurrent protection, Voltage Independent (VI)

The EN 61008-2-1 standard is the European application of the product standard for residual current circuit breakers with no overcurrent protection (RCCB) functionally independent of the line voltage; it is used for protection against electric shock and circuit protection applications. It meets the requirements of the European application of IEC 60364 low voltage electrical installation standard.

Residual Current Device standards

IEC 61009-1

Residual Current Circuit Breaker with Overcurrent Protection

The IEC 61009-1 standard is an international product standard requesting the general rules for residual current circuit breakers with overcurrent protection (RCBO); it is used for protection against electric shock and circuit protection applications. It meets the requirements of the IEC 60364 low voltage electrical installation standard.

EN 61009-1

Residual Current Circuit Breaker with Overcurrent Protection

The EN 61009-1 standard is the European application of the product standard requesting the general rules for residual current circuit breakers with overcurrent protection (RCBO); it is used for protection against electric shock and circuit protection applications. It meets the requirements of the European application of IEC 60364 low voltage electrical installation standard.

IEC 62423

Type B RCD

The IEC 62423 standard is an international product standard for residual current devices of type B and type F; it is used for protection against electric shock and circuit protection applications. It meets the requirements of the IEC 60364 low voltage electrical installation standard.

EN 62423

Type B RCD

The IEC 62423 standard is the European application of the product standard for residual current devices of type B and type F; it is used for protection against electric shock and circuit protection applications. It meets the requirements of the European application of IEC 60364 low voltage electrical installation standard.

0664-40

The VDE 0664-40 standard is the German product standard concerning residual current devices of type B and type F; it is used for protection against electric shock and circuit protection applications. It meets the requirements of the German application of IEC 60364 low voltage electrical installation standard.

IEC 61543

Electromagnetic compatibility of RCDs

The IEC 61543 standard is an International standard defining the requirements for electromagnetic compatibility of RCDs.

The standards and their applications

Example of use of UL 489 circuit breakers and UL 1077 electrical equipment internal protective devices

UL 1077

Applications allowing the use of electrical equipment internal protective devices

UL 1077 1

Supplements an existing protective device or provides additional protection inside equipment

UL 1077 2

Used for the protection of internal circuits such as:

- Computers and microprocessors
- Telecommunications equipment
- Electronic controllers
- Power supply sources
- Transformers
- Small motors.

UL 489

Applications requiring branch circuit protection

UL 489 1

Equipment incoming end protection.

UL 489 2

Power socket circuit protection (internal or external).

UL 489 3

Protection of an external circuit (e.g. motor).

UL 489 4

Protection of heating, ventilation and air conditioning equipment (HACR/HVAC).

Circuit breakers tripping curves

The following curves show the total fault current breaking time, depending on its amperage. For example: based on the curve on "Circuit breakers tripping curves", page 100, a C60 circuit breaker of curve C, 20 A rating, will interrupt a current of 100 A (5 times the rated current I_n) in:

- 1 second at least
- 7 seconds at most.

The circuit breakers' tripping curves consist of two parts:

- tripping of overload protection (thermal tripping device): the higher the current, the shorter the tripping time
- tripping of short-circuit protection (magnetic tripping device): if the current exceeds the threshold of this protection device, the breaking time is less than 10 milliseconds. For short-circuit currents exceeding 20 times the rated current, the time-current curves do not give a sufficiently precise representation. The breaking of high short-circuit currents is characterized by the current limiting curves, in peak current and in energy. The total breaking time can be estimated at 5 times the value of the ratio $(I^2t)/(\hat{I})^2$.

Verification of the selectivity between two circuit breakers

By superimposing the curve of a circuit breaker on that of the circuit breaker installed upstream, one can check whether this combination will be discriminating in cases of overload (selectivity for all current values, up to the magnetic threshold of the upstream circuit breaker). This verification is useful when one of the two circuit breakers has adjustable thresholds; for fixed-threshold devices, this information is provided directly by the selectivity tables. To check selectivity on short circuit, the energy characteristics of the two devices must be compared.

Alternative current 50/60 Hz

C60BP, C60BPR, C60SP

According to IEC/EN 60947-2 (reference temperature 25°C)

Curves Z, B, C, D

Note: IEC/EN 60947-2 tripping curves, respecting the tripping time specified by the standards UL 489, CSA C22.2 No 5, UL 1077 and CSA C22.2 No 235

C60BP, C60BPR, C60SP

According to IEC/EN 60947-2 (reference temperature 25°C)

Curves Z, B, C, D

Note: IEC/EN 60947-2 tripping curves, respecting the tripping time specified by the standards UL 489, CSA C22.2 No 5, UL 1077 and CSA C22.2 No 235

C60N, C60H, C60L, C60CTRL

According to IEC/EN 60947-2 (reference temperature 50°C)

Curves Z, B, C, D

C60H-DC

According to IEC/EN 60947-2 (reference temperature 25°C)

Curves B, C, K

Note: IEC/EN 60947-2 tripping curves, respecting the tripping time specified by the standards UL 1077 and CSA C22.2 No 235

Circuit breakers tripping curves (cont.)

The circuit-breaker characteristics chosen depend on the type of load downstream of the installation.

The rating depends on the size of the cables to be protected and the curves depend on the load inrush current.

Product selection according to the load inrush current

When certain "capacitive" loads are switched on, very high inrush currents appear during the first milliseconds of operation. The following graphs show the average non-tripping curves of our products for this time range (50 μ s to 10 ms).

C60N, C60H, C60L, C60CTRL, C60BP, C60BPR, C60SP

C60H-DC

This information allows us to select the most appropriate product, according to the load specifications: curve and rating.

Example

When an C60 is used with a load with current peaks in the order of 200 I_n during the first 0.1 millisecond, a curve C or D product must be installed.

Miniature Circuit Breakers for DC applications up to 380 V DC

This application sheet is intended to offer guidance on selecting suitable protection and control components for a given DC system. The scope is DC system supplied by rectifier (AC/DC or DC/DC converter) and/or battery, isolated or connected to earth. The application voltages are 24 V DC, 48 V DC, 110 V DC and 220 V DC.

A. Circuit breaker selection for 24/48 V DC according to the method of earthing

Refer to Tables A of Application Guide CA908061E.

C60BP / C60BPR / C60SP and C60N/H/L circuit breakers follow the wiring rules of iC60N/H/L circuit breakers.

Multi9 C60H-DC circuit breakers follow the wiring rules of Acti9 C60H-DC circuit breakers.

The breaking capacities of these products are available in catalog pages.

B. Circuit breaker selection for 110 V DC according to the method of earthing

Refer to Tables B of Application Guide CA908061E.

Multi9 C60H-DC circuit breakers follow the rules of Acti9 C60H-DC circuit breakers.

Ue = 110 V DC					
Method of earthing		IT	TN		
		Isolated from earth + and - conductors protected and disconnected	- (or +) earthed + and - conductors protected and disconnected	Midpoint earthed (not distributed) + and - conductors protected and disconnected	- (or +) earthed + (or -) conductor protected and disconnected

		C60H/L 4P	C60H/L 3P	C60H/L 2P	C60H/L 2P
Isc ≤ 30 kA	In ≤ 25 A				
		C60L 4P	C60L 3P	C60L 2P	C60L 2P

Note: This table is applicable for 125 V DC floating battery voltage.

C. Circuit breaker selection 220 - 380 V DC according to the method of earthing

Refer to Tables C of Application Guide CA908061E.

Multi9 C60H-DC circuit breakers follow the rules of Acti9 C60H-DC circuit breakers.

Influence of ambient temperature

Influence of temperature on the operation

Devices	Characteristics influenced by temperature	Temperature	
		Mini	Maxi
C60BP, C60BPR, C60SP, C60N, C60H, C60L, C60CTRL circuit breakers	Tripping on overload	-30°C	+70°C
N40N circuit breakers	Tripping on overload	-25°C	+70°C
C60H-DC circuit breakers	Tripping on overload	-25°C	+70°C
Circuit breakers with	Vigi AC Type	-5°C	+60°C
	Vigi A-SI Type	-25°C	+60°C
N40 Vigi	Tripping on overload	-5°C	+60°C
GFP A-SI Type	Maximum operating current	-25°C	+60°C
RCCB-ID 125 A	Maximum operating current	-25°C	+40°C
iID B-SI type	Maximum operating current	-25°C	+60°C

Note: the temperature considered is the temperature viewed through the device.

Circuit breakers

High temperatures

- A rise in temperature decreases the tripping current of the thermal protection.
- Protection is still ensured: the tripping threshold remains lower than the current acceptable by the cable (I_z)
- To prevent nuisance tripping, it should be checked that this threshold remains higher than the maximum operating current (I_B) of the circuit, defined by:
 - the rated load currents,
 - the coefficients of expansion and simultaneity of use.

If the temperature is sufficiently high for the tripping threshold to become lower than the operating current I_B , switchboard ventilation should be provided for.

Low temperatures

- A fall in temperature increases the tripping current of the thermal protection.
- There is no risk of nuisance tripping: the threshold remains higher than the maximum operating current of the circuit (I_B) demanded by the loads.
- It should be checked that the cable remains suitably protected, i.e. that its acceptable current (I_z) is higher than the values shown in the following tables (in amperes).

When the ambient temperature could vary within a broad range, both these aspects must be taken into account:

- the difference between the maximum operating current of the circuit (I_B) and the tripping threshold of the circuit breaker for the minimum ambient temperature,
- the difference between the strength of the cable (I_z) and the maximum tripping threshold of the circuit breaker for the maximum ambient temperature.

Influence of ambient temperature (cont.)

Maximum permissible current

- The maximum current allowed to flow through the device depends on the ambient temperature in which it is placed.
- The ambient temperature is the temperature inside the enclosure or switchboard in which the devices are installed.
- The reference temperature is in a halftone colour for the different devices.
- When several devices operating simultaneously are mounted side by side in a small enclosure, a temperature rise in the enclosure results in a reduction in the operating current. A reduction coefficient of 0.8 will then have to be assigned to the rating (already derated, if applicable, depending on the ambient temperature).

■ Example:

Depending on the ambient temperature and the method of installation, the table below shows how to determine, for a C60, the operating currents not to be exceeded for ratings 25 A, 32 A and 40 A (reference temperature 50°C).

Operating current not to be exceeded (A)							
Installation conditions (IEC 60947-2)		C60 alone			Several C60 in the same enclosure (calculate with the reduction coefficient indicated below)		
Ambient temperature (°C)		35 °C	50 °C	65 °C	35 °C	50 °C	65 °C
Type	Nominal rating (A)	Actual rating (A)					
C60	25	26.7	25	23.2	$26.7 \times 0.8 = 21.4$	$25 \times 0.8 = 20$	$23.2 \times 0.8 = 18.6$
	32	34	32	29.9	$34 \times 0.8 = 27$	$32 \times 0.8 = 25.6$	$29.9 \times 0.8 = 24$
	40	42.9	40	36.9	$42.9 \times 0.8 = 34.3$	$40 \times 0.8 = 32$	$36.9 \times 0.8 = 29.5$

Influence of ambient temperature (cont.)

RCCB

■ In all cases, the RCCB are protected against overloads by a circuit breaker with a lower or equal rating, operating at the same ambient temperature.

Dissipated power, Impedance and Voltage drop

Acti9 products

The following table indicates the average dissipated power per pole in W for a current equal to the rating of the device and at the operating voltage.

Rating (A)	0.5	1	1.6	2	2.5	3	4	6	6.3	10	12.5	13	16	20	25	32	40	45	50	63	80	100	125

Add-on residual current devices																								
Vigi C60 AC / A-SI Type																					3.0			
Vigi N40 AC / A-SI Type																		2.1						

Note: RCBO dissipated power per pole is the sum of circuit breaker dissipated power per pole + add-on residual current device dissipated power per pole.

Example: C60N (63 A) + Vigi C60 (63 A) = 4.3 + 3.0 = 7.3 W.

Impedance calculation:

$$Z = P / I^2$$

Z: impedance in Ohms

P: dissipated power in Watts (table values)

I: rating in Amperes

Voltage drop calculation:

$$U = P / I$$

U: voltage drop in Volts

P: dissipated power in Watts (table values)

I: rating in Amperes

Short-circuit current limiting

Prospective current and real limit current.

Definition

The limiting capacity of a circuit breaker is its ability to lessen the effects of a short-circuit on an electrical installation by reducing the current amplitude and the dissipated power.

Benefits of limiting

Long installation service life

Thermal effects

Lower temperature rise at the conductor level, hence increased service life for cables and all components that are not self-protected (e.g. switches, contactors, etc.)

Mechanical effects

Lower electrodynamic repulsion forces, hence less risk of deformation or breakage of electrical contacts and busbars.

Electromagnetic effects

Less interference on sensitive equipment located in the vicinity of an electric circuit.

Savings through cascading

Cascading is a technique derived directly from current limiting: downstream of a current-limiting circuit breaker it is possible to use circuit breakers of breaking capacity lower than the prospective short-circuit current (in line with the cascading tables). The breaking capacity is heightened thanks to current limiting by the upstream device. Substantial savings can be achieved in this way on switchgear and enclosures.

Selectivity of protection devices

The circuit breakers' current limiting capacity improves selectivity with the protection devices located upstream: this is because the required energy passing through the upstream protection device is greatly reduced and can be not enough to cause it to trip. Selectivity can thus be natural without having to install a time-delayed protection device upstream.

Short-circuit current limiting (cont.)

Representation: Current limiting curves

The current limiting capacity of a circuit breaker is reflected by 2 curves which give, as a function of the prospective short-circuit current (current which would flow in the absence of a protection device):

- the real peak current (limited)
- the thermal stress (in A²s), this value, multiplied by the resistance of any element through which the short-circuit current passes, gives the power dissipated by this element.

The straight line "10 ms" representing the energy A²s of a prospective short-circuit current of a half-period (10 ms) indicates the energy that would be dissipated by the short-circuit current in the absence of limiting by the protection device (see example).

Example

What is the energy limited by a C60N 25 A circuit breaker for a prospective short-circuit current of 10 kA rms. What is the quality of current limiting?

> as shown in the graph opposite:

- this short-circuit current (10 kA rms) is likely to dissipate up to 1,000 kA²s
- the C60N circuit breaker reduces this thermal stress to: 43 kA²s, which is 23 times less.

C60N Thermal stress (380-415 V AC)

Example of use: Stresses acceptable by the cables

The following table shows the thermal stresses acceptable by the cables depending on their insulation, their composition (Cu or Al) and their cross section. Cross-section values are expressed in mm² and stresses in A²s.

S (mm ²)		1.5	2.5	4	6	10
PVC	Cu	2.97×10^4	8.26×10^4	2.12×10^5	4.76×10^5	1.32×10^6
	Al					5.41×10^5
PRC	Cu	4.10×10^4	1.39×10^5	2.92×10^5	6.56×10^5	1.82×10^6
	Al					7.52×10^5
S (mm ²)		16	25	35	50	
PVC	Cu	3.4×10^6	8.26×10^6	1.62×10^7	3.21×10^7	
	Al	1.39×10^6	3.38×10^6	6.64×10^6	1.35×10^7	
PRC	Cu	4.69×10^6	1.39×10^7	2.23×10^7	4.56×10^7	
	Al	1.93×10^6	4.70×10^6	9.23×10^6	1.88×10^7	

Example

Is a Cu/PRC cable of cross section 10 mm² protected by a C60N 40 A device?

The above table shows that the acceptable stress is 1.82×10^6 A²s. Any short-circuit current at the point where a C60N 40 A device ($I_{cu} = 10$ kA under $U_e = 380-415$ V AC Ph/Ph) is installed will be limited, with a thermal stress of less than 50000 A²s.

The cable is therefore always protected up to the breaking capacity of the circuit breaker.
